- Project Management and Turn Key Solutions
- Cloud Computing Hosting
- Wireless Mobile and GPS application Development
- Security and Surveillance Design and Implementation

In our work with clients, we often solve problems and provide solutions that can apply more broadly to the entire industry.

Our clients are financial institutions and banks, distribution centers, fleet and delivery operations, manufacturing, retail, health sector, security, and government entities. ExpoTech Engineering understands that every business is different and that the technology required to enable your business are different.

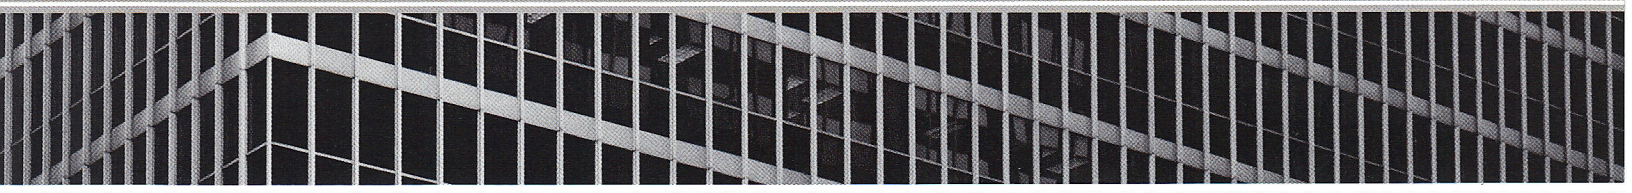

Our Solution Architects and Senior Consultants not only understand technology but also understand that I.T. projects need to deliver business value.

Our Application Development services can include complete project management from the initial consultation to successful completion of your project, or more simply, provide support for application management.

We help companies carry out their business by providing the most qualified IT professionals with experience in: Desktop Support, Web Development, Help Desk/Technical Services, Software Development, Data/Database Management, Internet/Intranet, Systems Integration, Security, Infrastructure Management, Project Management/Business Analysis.

Oil Technology Management System

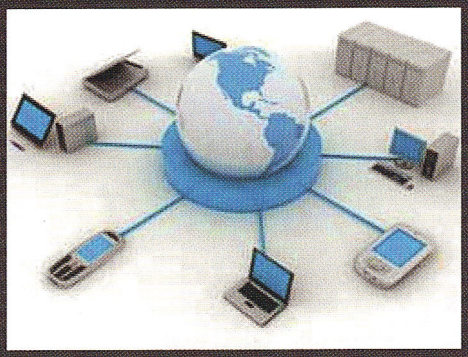

Turnkey solution to manage Oil gas stations inventory in real-time from Anywhere Anytime Anyplace, and dispense oil via wireless card membership. Expotech Fuel Management System is capable of assigning the correct grade of fuel and the right amount to be dispensed via debit card or pre-payment instantly and wirelessly. The system will eliminate a non-authorized fuelling and will provide detailed and comprehensive management reporting in real-time any time anywhere on any device. Expotech system can easily integrate with pre-installed dispensers regardless of the make or model. ExpoTech can integrate externally to the dispenser and still control the fuelling amount and the type. The ExpoTech system is fully automated, easy to use with minimal maintenance required.

Benefits

- Minimize losses with real-time fraud pattern detection and correlation.
- Detect and stop fraud in real-time across various banking channels
- Correlate and identify patterns within high-velocity streams across channels
- Match real-time transactional data against customer history profiles
- Handle big data with ease
- Handle massive amounts of data in motion from various data sources
- Store relevant data in-memory for low-latency responses
- Scale up or out to meet new demand
- Set the rules as needed
- Rapidly add new fraud rules
- Create tailored fraud detection rules quickly
- Update and fine-tune existing fraud rules in real-time
- Increase management visibility
- Monitor fraud investigation efforts for increased operational efficiency
- Balance and prioritize workloads to ensure maximum recovery
- Get complete auditing transparency and traceability
- Faster detection of fraud and faster action to eliminate fraud
- Enable real-time processing of transactions to detect fraud by maintaining all data in-memory
- Easily integrate with different applications to manage several types of fraud
